Second announcement

The Organizational Committee of the Russia–China International Conference on Nonlinear Deep-Level Geomechanics has a pleasure to invite you and your colleagues and partners to take part in the Conference and its activities.

Scope of the Conference

The Conference offers a platform for the discussion of the issues and findings of the basic research:

- physics and geomechanics of deep-focus failure zones due to disastrous events in rock mass, and features of geomechanical processes in deep-level mining;
- nonlinear interaction between geomechanical and physicochemical mass exchange and gas transfer processes in hydrocarbon-bearing rock mass (coal, oil and gas, oil shale);
- geomechanical, geodynamic and geocological safety of deep-level mining in different conditions of natural climate and geology;
- new methods and facilities for the prediction and prevention of overburden pressure-related catastrophic events, advanced geomonitoring systems.
